### Report on Workshop

### Latest Trends in Cyber Crimes/Security

January 18<sup>th</sup>, 2018

The workshop was inaugurated by K. Venkatesh Murthy, Deputy Director, Data Security Council of India, Bengaluru and was followed by keynote delivery regarding the importance to know about what is cybercrime and how it can be prevented to some extent.

#### Cyber Crimes:

Cybercrime can be committed against an individual or a group; it can also be committed against government and private organizations. It may be intended to harm someone's reputation, physical harm, or even mental harm.

Cybercrime can cause direct harm or indirect harm to whoever the victim is. However, the largest threat of cybercrime is on the financial security of an individual as well as the government.

#### Cyber Security:

Cyber security is a potential activity by which information and other communication systems are protected from and/or defended against the unauthorized use or modification or exploitation or even theft. Cybersecurity is a well-designed technique to protect computers, networks, different programs, personal data, etc., from unauthorized access.

All sorts of data whether it is government, corporate, or personal need high security; however, some of the data, which belongs to the government defense system, banks, defense research and development organization, etc. are highly confidential and even small amount of negligence to these data may cause great damage to the whole nation. Therefore, such data need security at a very high level.
